WAGE RATES AND HOURS OF LABOUR IN CANADA, 1944

SUMMARY

THE general level of wage rates in Canada was higher in 1944 than in any previous year in the record; the index covering six main industrial groups being 37.5 per cent higher than in 1939, and 28.5 per cent higher than in 1920 which was the peak of the inflationary movement following World War I. For the period August 1939 to December 1944 the index number of the cost of living advanced 17.6 per cent.

During this period considerable increase in wage rates in all main industry groups was recorded, year by year, continuing the advance from the low levels of the depression reached in 1933. From 1939 to 1940 the general index number of wage rates advanced 3.9 per cent; from 1940 to 1941, 8.8 per cent; 1941 to 1942, 8.3 per cent; from 1942 to 1943, 8.4 per cent; and from 1943 to 1944, 3.5 per cent. The percentage increase in 1944 was much less therefore than in any of the three preceding years and slightly less than between 1939 and 1940.

Wage rates in the logging groups were 46.1 per cent higher in 1944 than in 1939, the increase since 1943 being 2.1 per cent. In mining the increase since 1939 was 34.8 per cent and since 1943, was 9.0 per cent. The manufacturing groups showed a wartime increase down to 1944 of 41.1 per cent, the advance since 1943 being 4.1 per cent. Construction recorded an increase in 1944 over 1943 of 1.5 per cent, and transportation, 0.8 per cent. The former advanced 29.6 per cent over 1939 and the latter 28.0 per cent. The services groups, including rates in laundries only, was 1.3 per cent higher in 1944 than in 1943 and 28.9 per cent higher than in 1939. While these indexes indicate the changes in wage rates in the various industries and groups of industries they do not of course afford any comparison of the rates from one industry to another or of the wage levels in one industry compared to another. Increases in wage rates since 1939 tended to be greater than the average in those industries in which per capita weekly earnings were less than the average.

INTRODUCTORY NOTES

Average wage rates in this report represent the payments for a unit of labour, usually one hour, on the basis of straight time rates or average piece work straight time earnings. For convenience they are referred to as average wage rates though average straight time hourly earnings is a more precise designation. In some cases they are average straight time weekly or monthly earnings. These averages* are shown for selected occupations in many industries for Canada and by province or region and in some cases by cities.

The index numbers of wage rates shown in the first tables in this report reflect therefore the changes in average straight time earnings.

The average wage rates shown for 1943 and 1944 were compiled from the statistics reported to the Department of Labour from about 15,000 establishments supplemented in some cases by information from trade union returns and from collective agreements. Most of the establishments with 15 or more employees were included in the survey with a representative number of smaller firms in certain industries, such as garages, machine shops, sawmills, in retail and wholesale trade and in the construction industry.

*The rates do not include the value of any allowances to employees such as, free transportation, uniforms, reporting times, group insurance, sick benefits, etc.

Employers were asked to report their straight time wage or salary rates as well as their average piece work straight time earnings in each occupation. Information was also obtained as to the numbers on the pay roll at each rate in each occupation.

The average rates or straight time earnings computed for each occupation from year to year are affected therefore by changes in the numbers of workers included at each rate as well as by changes in rates or earnings. Changes in rates reflect not only general wage rate and piece rate changes but also changes for individuals and small groups of employees and likewise changes in grade up or down within an occupational rate range. As the rates published are for day shift workers only, they are not affected by changes in shift differentials nor do they reflect any changes in overtime or other premium payments.

Predominant ranges of rates are also shown. These ranges include approximately the middle 80 per cent of the workers covered in each occupation. The purpose of this was to eliminate extremely high and extremely low wages but at the same time to show the ranges between which are included the great majority of the workers in each occupation. The rates for all workers in each occupation are included however in the average wages. The data apply to 1944 but for many industries comparative figures are shown for 1943 and in some cases for earlier years.

The statistics of rates by industries are shown in Tables III to X inclusive, while Table XI contains information on straight time or standard hours of work by industries.

The index number calculated for the period 1939 to 1944 on the base of rates in 1939, the last prewar year as 100, is shown for a fairly detailed industrial breakdown and by main industry groups in Table I, a continuation of the series first published in the preceding Report No. 26. For the period 1901 to 1939 the index is shown in Table II for the main groups of industries only, and in Table IIA for these groups on the base of rates in 1935 to 1939 as 100.

An appendix to the report gives data regarding wages paid to farm labour in 1944 and 1945, as published by the Dominion Bureau of Statistics.

Statistics of rates of wages and hours of labour have been collected by the Department since it began to function in 1900 and were published from time to time in the *Labour Gazette*. A separate report on wages was issued in 1921 as a supplement to the *Labour Gazette*. This was the first report in the series and contained statistics for certain trades and industries in various cities in Canada from 1901 to 1920 with index numbers based on rates in 1913 as 100. The information was obtained mainly from employers and trade unions but data from collective agreements and from Departmental officers and correspondents were also used.

In subsequent reports the scope of the statistics has been gradually broadened to include a representative list of occupations in most industries and additional groups were added from time to time to the table of index numbers.

In Report No. 24, containing statistics for 1940 and previous years, the index number was converted to the base 1935-1939 as 100 following the publication by the Dominion Bureau of Statistics of a new official index number of the cost of living on that base. Report No. 25 covered the years 1929, 1940 and 1941. No report was published covering the year 1942, but a table of index numbers appeared in the *Labour Gazette* for December, 1943.

INDEX NUMBERS

In Table I an index number of wage rates covering the period 1939 to 1943 is shown for each of six main industrial groups and for each of the industries included therein.

The index number was calculated by the use of weighted aggregates. The weighted average wage rate was obtained for each of a representative list of occupations in an industry. Each such average was multiplied by the number of workers in the occupation used as a weight for that occupation. For the index number for the industry the sum of these products was expressed as a percentage of the corresponding sum in the base year.

To obtain each main industrial group index, the indexes for the various industries included were weighted by the number of workers in each industry based on census data. The general index was computed from the main industrial groups by similar weighting procedure.

For the period 1901 to 1939 the index numbers were calculated by the use of link relatives. For this period the percentage change from year to year for each occupation was calculated. The simple arithmetic average of these percentages was obtained and the average increase or decrease applied to the index for the industry for the preceding year. To obtain the general index the main group indexes were weighted in proportion to the number of workers in each group based on data from the decennial census.

WAGE CONTROL AND THE COST OF LIVING BONUS

Much of the wartime increase in wage rates was due to the payment of a cost of living bonus provided for under the wages control policy of the Government. All such bonuses have been included in the rates for these years throughout this Report.

The first order relating to the control of wages and the payment of a bonus to cover increases in the cost of living was Order in Council P.C. 7440 of December 16, 1940, for the guidance of Boards of Conciliation and Investigation in their recommendations in dealing with disputes over wages for mining, some public utilities and war industries under the Industrial Disputes Investigation Act. The policy was recommended also for the adjustment of wages generally.

This Order was replaced by the Wartime Wages and Costs of Living Bonus Order P.C. 8253 of October 24, 1941, which stabilized all wage rates at the level in effect on November 15, 1941. No change in basic rates was permitted without the approval of The National War Labour Board or a Regional Board which were set up under the Order.

This Order in turn was replaced by the Wartime Wages Control Order P.C. 5963 of July 10, 1942, which was a consolidation of previous orders and amendments thereto.

A cost of living bonus was payable under both the above Orders and adjusted quarterly in accordance with orders issued by the National Board. For each rise of one point in the cost of living index of the Dominion Bureau of Statistics, adjusted to the base of August 1939 as 100, the bonus must be increased by 25 cents a week in the case of adult male employees and all other employees receiving \$25.00 a week or more, and by one per cent of the basic weekly wage rate in the case of men under 21 years of age and women who receive less than \$25.00 per week.

Following the establishment of the ceiling on prices effective December 1, 1941, increases in the cost of living were slight with the result that no general adjustment in the bonus was ordered until the summer of 1942. The first adjustment was 60 cents per week for those on the flat rate or 2.4 per cent for those on a percentage basis as from August 15, 1942. This was later increased to 95 cents per week or 3.8 per cent as the case may be as from November 15, 1943.

The maximum bonus payable under these orders was \$4.60 per week for those on the flat rate bonus and 18.4 per cent of the basic wages for those on a per-

centage bonus both based on an increase in the cost of living since August 1939 of 18·4 points.

Under Order in Council P.C. 9384 of December 9, 1943, effective February 15, 1944, provision was made for the establishment of wage rates incorporating therein cost of living bonuses payable in respect of the rise in the cost of living, to stabilize the wage structure established in this manner, and to provide machinery for rectification of any gross inequalities and injustices in wage rates so established.

For details of the Orders in Council dealing with wage control and cost of living bonus, see the *Labour Gazette*; a bulletin issued by the Department of Labour, Wartime Orders in Council Affecting Labour (Revised Edition June 1943); and bulletins issued by the National War Labour Board.

Table V—WAGE RATES IN MANUFACTURING INDUSTRIES
1943 AND 1944

(1) PRIMARY TEXTILE PRODUCTS

NOTE.—For more detailed information see report "Wages and Hours in the Primary Textiles Industry in Canada, 1944", issued as a supplement to the *LABOUR GAZETTE* for February, 1946. The rates shown are average straight time wages or earnings per hour. Most of the employees in this industry are on piece work.

Table VII—WAGE RATES IN TRANSPORTATION AND STORAGE,
1943 AND 1944

(1) WATER TRANSPORTATION (INLAND AND COASTAL)

NOTE.—Rates include board and lodging and vary to a great extent according to size or type of vessel. Hours on duty for officers, seamen, deckhands, etc., generally average twelve per day (watches—six hours on, six hours off) seven days per week except when in port; for engineers, firemen, oilers, etc., hours generally average eight per day, but twelve in some cases; for stewards, cooks, etc., hours vary according to requirements. All classes may be required for extra duty at any time, especially in the Great Lakes and Upper St. Lawrence service when passing through canals. On most of the British Columbia coastal passenger vessels hours for all classes average eight per day, 6 days per week, with extra pay for overtime. Some of the tug-boat employees in all areas are on the eight-hour day.

(a) Deductions from each employee's earnings on basic rates effective as follows. Train, engine and telegraph service, 10 per cent Dec. 1, 1931; 20 per cent May 1, 1933; 15 per cent Nov. 1, 1933; Maintenance of way and bridge and building, 10 per cent May 1, 1932; 15 per cent Dec. 1, 1933; Locomotive and car shops, 10 per cent April 1, 1932; 15 per cent Dec. 16, 1933, with certain exceptions. Deductions amended for all classes effective as follows: Jan. 1, 1935, 12 per cent; May 1, 1935, 10 per cent; in 1937, between February and December reduced to 4 per cent; in 1938, eliminated by April 1.

(b) Cost of living bonus per week: \$1.93—June 1, 1941; \$2.75—Sept. 1, 1941; \$3.65—Nov. 15, 1941; \$4.25—Aug. 15, 1942; \$4.60—Nov. 15, 1943, this amount being incorporated in basic rates Feb. 15, 1944.

(c) Basic rates increased from September 15, 1943, by 6 cents per hour, as the result of a retroactive award by the National War Labour Board, Dated July 31, 1944.

(d) These employees are allowed approximately one per cent per hour extra for checking in and out.

(e) Machinists, boilermakers, blacksmiths, plumbers, etc., sheet metal workers, cabinet makers, carpenters—coach, locomotive and bench, welders, etc.

(f) Freight car carpenters, freight car painters, car repairers, etc.

* The wage rates are straight time hourly rates only and do not include the value of various allowances to employees such as, free transportation, uniforms, reporting times, group insurance, sick benefits, etc. These vary from city to city.

** Maximum rates based on length of service.

† Including troublemen and, in some cases, groundmen; in some localities line maintenance work is performed by employees of light, heat and power distribution utilities, rates for which are included here.

‡ Including shedmen, pitmen, cleaners, blacksmiths, carpenters, painters, etc.

(*) Including armature winders, wiremen, etc.

(§) Rate applies also to bus operators.

(††) Bus operators: 1943—68, 1944—73 cents per hour.

Transportation, Storage and Communication						
Transportation and Storage						
Water Transportation (Inland and Coastal).				Hours on duty for officers, seamen, deckhands, etc., generally average twelve per day (watches—six hours on, six hours off) seven days per week except when in port; for engineers, firemen, oilers, etc., hours generally average eight per day, but twelve in some cases; for stewards, cooks, etc., hours vary according to requirements. All classes may be required for extra duty at any time, especially in the Great Lakes and Upper St. Lawrence service when passing through canals. On most of the British Columbia coastal passenger vessels hours for all classes average eight per day, 6 days per week, with extra pay for overtime. Some of the tug-boat employees in all areas are on the eight-hour day.

APPENDIX—WAGES IN AGRICULTURE, 1944—Concluded

The information given below has been reproduced from a bulletin on "Farm Wages in Canada", issued September 29, 1945, by the Dominion Bureau of Statistics—Agricultural Branch. The figures were compiled from reports made by farm correspondents in all provinces.

Farm Wage Rates August 15, 1943, 1944 and 1945.

The general trend in farm wages continues up with wages by the day in only Manitoba and Saskatchewan showing decreases at August 15, 1945, as compared with August, 1944. The average wages per day of male farm help showed decreases of from 50 cents to 60 cents in Manitoba and Saskatchewan. The wages per day in these two provinces, though lower than the high wages occasioned by the heavy crops of 1944, were still considerably higher than the wages paid in 1943. The demand for day help in the west was moderated by the smaller harvests of 1945, while the assistance from eastern help, military leaves, etc., helped fill the demand. All other provinces showed moderate increases in the average wages per day of male farm help.

The average wages per month of male farm help showed substantial increases over August, 1944, in all provinces indicating the continued demand for steady help. The largest increases occurred in Nova Scotia and New Brunswick. New Brunswick also had the highest average wage with board at \$80.63 per month. Saskatchewan and Alberta followed while Prince Edward Island at \$52.59 had the lowest. The highest average wage at \$111.00 per month without board occurred in Alberta with New Brunswick next, followed closely by British Columbia and Saskatchewan and with Prince Edward Island again lowest with a wage rate of \$76.25.

The Canada average wage rates are calculated using a relative weighting for the provinces. These provincial weightings have been revised this year and the revisions have been carried back to previous years on a comparable basis.
